An Outstanding Westchester Nursery

In presenting this little booklet to our customers and friends, it is our aim to bring you in a concise, simple and practical form certain information which we feel is essential in the landscaping of your home grounds. Most everyone realizes the real satisfaction in having your home appear as beautifully and as artistically land-

scaped as possible. This information is prepared for your use and we sincerely hope that it will assist you with your plans for planting.

Our founder, Mr. Richard Langle, began his horticultural career in 1894—and right here in Westchester County. From a lowly start, he has continued to improve and expand his business to its present size—a nursery of 19 acres planted with hundreds of varieties of perennials, evergreens, shrubs, and trees. The Raven Rock Nurseries at East View, N. Y., have been operated by

him for the past fifteen years. His wide experience with growing in Westchester qualifies him to give you expert advice on your planting problems. You will always find him active in the supervision of the work here at the Nursery. He is constantly on the alert in seeing that every customer is given prompt, courteous and efficient service and above all things, he makes certain that each and every plant, shrub, tree, or whatever your purchase

may be, is of the very best quality in every respect. Forty years experience has proven this to be the shortest route to success.

No attempt has been made in this booklet to list all the varieties that we carry. Inasmuch as this is a booklet devoted to information, prices have been purposely

> omitted. You will find that our prices are extremely low in comparison to other reputable nurseries.

We would like to say just a word about the quality of our stock. We have always produced the finest quality stock at reasonable prices. All of our stock has been transplanted at regular intervals, carefully sprayed and pruned and we have made every effort to produce plants that will live and thrive in Westchester County. Our large list of satisfied customers who purchase additional stock year after year is only one of our valued testimonials. Under no condition will

Mr. Richard Langle

we allow stock to go out of our nursery to our customers unless it measures up to the quality standards established and followed by us during past years. We believe that the interest and satisfaction of our customers should always be our first consideration. The outer appearance of your home is important for your satisfaction. With the aid of this booklet and a moderate expenditure you can make your home more beautiful.

Perennial Gardens are Easily Built and RESPOND GENEROUSLY TO MINIMUM CARE

We specialize in growing rock garden plants. Above is shown one of the really delightful spots in our nursery—a rock garden full of new and interesting plants

PRICES

The perennials on the following pages are priced at 25c., 12 for \$2.50, with the exception of a few choice and new varieties.

Westchester's Best in Perennials

For many years, our founder, Mr. Richard Langle, has devoted himself to the raising of perennials. The time has come when our nursery is being recognized as the foremost growers of fine and unusual perennials in Westchester county.

Beautiful perennial gardens are easily built providing the builder uses care, judgment and knowledge. The safest method of producing satisfactory results is to seek the advice of a competent nurseryman. We feel that our varied experience qualifies us to give you the needed advice. However, if you wish to create this type of garden yourself, we have listed on the following pages all the information you will need to guarantee good results in your perennial garden.

The first step in the making of a permanent perennial bed or rock garden is the preparation of the ground. The soil should be thoroughly spaded to about a foot in depth, breaking up all lumps, removing stones and raking very fine. Excess use of commercial fertilizers tend to burn the delicate roots. We have had very good results from spading, or raking into the soil shredded cattle manure. which is a mild but effective fertilizer. A little peat moss tends to conserve moisture and keep the soil from baking. It is very beneficial to loosen the soil around plants after a rain or watering.

In the selection of the plants you should bear in mind the relative heights of the various types. Naturally the tallest should be placed in the rear graduating down to the lowest in the front.

It has been often said that nature provides color harmony. This is not literally true as certain colors clash whether they are produced by man or by nature. This can be controlled by careful selection for color harmony.

When our perennials are in bloom, come and see them. You will find many new and interesting varieties. Our many years of experience in creating this type of garden is at your disposal for the asking.

EVERGREENS The Backbone of

Any Landscape

Every nursery specializes in some type of plant. This can be noted by the prominence given in their catalogue also by the quantity and quality in the nursery. Here at Raven Rock Nurseries beside having one of the finest collections of perennials and rock garden plants, you will find an unusual collection of medium sized evergreens of splendid specimen quality.

The answer for our specialization is quite simple. Evergreens of this size

are the foundation of any planting. There is literally no spot in the home planting that can do without these majestic trees, which are so effective during the growing season and also produce a green effect throughout the entire Winter months.

Evergreens can be divided into five classifications: Columnar Type— Tall Growing Type—Spreading Type—Broad Conical Type—Dwarf Compact Type. Each of these has it's particular function in the planting scheme. To facilitate your choice and assist you in planting the correct type in the right spot we are listing our evergreens on the following pages under the five above mentioned classifications.

We would like to emphasize at this time the fine quality of our stock. This is the result of systematic and careful shearing, cultivating, feeding and transplanting. Particularly important is transplanting for this encourages

> fibrous root growth—a condition necessary for general health

after being planted in your home grounds.

Of course, in the limited space of these pages, we cannot list all the varieties we carry, so we are listing the most important. Any question that might arise whose answer cannot be found on the following pages will be gladly explained by us at our nursery. All advice is cheerfully given and your solicitation will not place you under any obligation.

EVERGREEN HEDGES

Very satisfactory hedges are made from Retinospora, Junipers, Mugho Pine, Taxus, Arborvitae and Hemlock. Each individual situation calls for different treatment and different variety of evergreen. Let us help you select the best variety for your requirements.

EAST VIEW, NEW YORK

COLUMNAR EVERGREENS

Sometimes it is desirable to plant Evergreens of a columnar type and as there are a great many varieties of these trees, we have grouped them together so that they can be readily distinguished. Some are fast growing while others are of the dwarf, slow growing type.

Cryptomeria japonica lobbi. Japanese Cedar. A fine novelty of slender habit; leaves deep green, assuming a stiff, prickly habit, changing to russet in the Fall.

Juniperus chinensis. Chinese Juniper. A native of Asia which has many points of merit. It is immune from severe Winters, can withstand heat and drought, and is free from plant diseases and pests. It forms a compact, pyramidal tree with bright green or glaucous, prickly needles.

Juniperus chinensis columnaris. Columnar Chinese Juniper. A beautiful, cone-shaped variety with dark gray foliagc. Similar to the above but of more shapely growth. Very formal.

Juniperus communis hibernica. Irish Juniper. Distinct and beautiful. Of erect, dense, formal outline with glaucous green foliage.

Juniperus virginiana. Redcedar. One of our oldest, most popular and best known evergreens. This tree varies considerably in habit and color and shape of foliage. In Summer they are a light green and in Winter a bronzy hue is assumed. Fine for formal planting or where an accent plant is required.

Juniperus virginiana cannarti

SIMCC.

Taxus cuspidata capitata

Juniperus virginiana burki. Burk's Redcedar. Distinct blue, forming a dense column; Winter coloring is metallic purple.

Juniperus virginiana cannarti. Cannart Redcedar. A fine, pyramidal, compact grower of dark green appearance.

Juniperus virginiana glauca. Silver Redcedar. This well known evergreen is gaining in popular favor every year due to its unusual silvery blue color. It is of compact, conical habit and can easily be kept trimmed to make fine formal specimens.

Juniperus virginiana keteleeri. A fine variety, with beautiful intense green foliage. Symmetrical growth with tops of branches ascending; very compact and formal.

Juniperus virginiana schotti. A fine, hardy evergreen of columnar habit. Foliage light green and feathery.

Taxus cuspidata capitata. Upright Japanese Yew. Upright growing form of Taxus. Matures into broad, shapely pyramidal specimens having the same scarlet berries as the spreading Yew. It is extremely hardy and one of the choicest evergreens.

Taxus media hicksi. Hicks Yew. A splendid accent plant, being narrow and columnar with rich, dark green foliage.

Thuja occidentalis. American Arborvitae. Pyramidal form with bright green, scaly leaves. A good accent plant. Very useful for grouping, hedges or screens. Will stand severe shearing. One of the most popular evergreens.

Thuja occidentalis elegantissima. Golden tipped Arborvitae. The tips of the shoots are golden yellow.

Thuja occidentalis lobbi atrovirens. Giant Arborvitae. Large, fleshy, deep green leaves. Pyramidal shape and of robust growth. This is a fine variety and it should be more widely used.

Thuja occidentalis lutea. Golden Arborvitae. Similar in habit and foliage to the American Arborvitae except that the foliage is of a golden yellow.

Thuja occidentalis lutea, George Peabody. George Peabody Arborvitae. Columnar shape with rich golden yellow foliage.

Thuja occidentalis pyramidalis. Pyramidal Arborvitae. Narrow columnar shape. Bright dense green foliage. Very valuable for accent or formal planting. One of the choicest Arborvitaes.

Thuja occidentalis rosenthali. Dense, dark green foliage. Compact slow grower.

Thuja occidentalis spiralis. Spiral Arborvitae. Compact, upright branches with dark green foliage.

Thuja occidentalis

This group of Evergreens consist of the type that mature into large trees from 30 to 75 feet tall. In planting these trees great care should be taken so that they have sufficient space to develop properly and that their ultimate height will render itself to the best advantage.

TALL GROWING EVERGREENS

Abies balsamea. Balsam Fir. The foliage is of a dark green color above, silvery beneath. It is widely known for its extremely pungent odor.

Abies concolor. White Fir. One of the finest ornamental evergreens. It is almost as blue as the Colorado Blue Spruce.

Abies douglasi. Red or Douglas-fir. The Douglas-fir is one of the most valuable of all coniferous trees. A vigorous, symmetrical and graceful tree which matures into large specimens. It is very hardy and will grow in almost as much shade as the Hemlock.

Abies douglasi

Picea excelsa. Norway Spruce. One of our best known evergreens. Adapted for specimens, windbreaks or hedges. A very hardy tree with dark green foliage and of rapid growth.

Picea pungens. Colorado Spruce. A stately evergreen that assumes large proportions when matured. Sharp, dull green leaves on horizontal branches. A fine lawn specimen.

Picea pungens glauca. Blue Colorado Spruce. The same as the preceding variety, except that the foliage is blue.

Picea pungens glauca kosteriana.

Koster Blue Spruce. The bluest of Blue Spruces. This is the most remarkable and conspicuous of all the conifers for ornamental planting. Being symmetrical and shapely, its ideal purpose is as a specimen.

Pinus densiflora. Japanese Red Pine. A tree of rapid growth when young. Branchlets are very light colored.

Pinus flexilis. Limber Pine. Similar to White Pine except that the foliage is of a distinct blue eolor.

Pinus nigra austriaca. Austrian Pine. Vigorous symmetrical tree. Long, rich green needles. The Winter buds are whitish and long.

Pinus strobus

Pinus strobus. White Pine. One of our most useful Pines for screen or group planting. They develop into tall, straight specimens. It will thrive on poor sandy soil. It has soft green needles with a very slight tint of blue.

Picea pungens

Pinus nigra austriaca

Pinus resinosa. Norway or Red Pine. A vigorous tree with long, rich green needles. Develops into line specimens.

Pinus sylvestris. Scotch Pine. Of rapid growth, with strong branches and short, stiff, bluish green needles. Will thrive in dry, sandy places.

Tsuga canadensis

Tsuga canadensis. American Hemlock One of the most graceful and adaptable of all the evergreens. The leaves are about half an inch long, dull green, and slightly grooved above, striped beneath. Does well in the shade. Matures into fine specimens. Very useful in founda-tion plantings as it can be readily sheared. They make a splendid hedge or windbreak. We have a wonderful stock of Hemlock all of which have been frequently transplanted and sheared.

Evergreens for screening

SPREADING EVERGREENS

Prostrate or spreading Evergreens invariably are used in almost every landscape planting. In this group we have combined the very low growing prostrate type as well as the larger or wide spreading varieties of Evergreens.

Juniperus chinensis pfitzeriana

Juniperus chinensis pfitzeriana. Pfitzer Juniper. A very hardy, valuable spreading variety, with silvery green feathery foliage. Very useful for exposed locations, borders and terraces.

Juniperus chinensis sargenti. A fine Juniper for the rock garden. It has low, trailing, dark green branches.

Juniperus communis. Common Juniper. A hardy, vase-shaped bush, with its leaves dark green above, and glaucous underneath.

Juniperus communis depressa. This is a true prostrate Juniper; our plants having a spread of 3 to 4 feet, are not over 15 inches high. Foliage similar to above. An excellent plant for the rockery.

Juniperus communis depressa plumosa. Plumed Spreading Juniper. New and very hardy, with foliage bright green in Summer and reddish purple in Winter. One of the best low spreading Junipers.

Juniperus squamata meyeri. Meyer Juniper. A new and very rare variety of irregular growth. It has a distinct glaucous blue foliage.

Pinus montana mughus. Mugho Pine. A slow growing dwarf evergreen with dark green needles. The branches are of spreading habit and never attain a height of over 3 or 4 feet which makes it a very desirable plant for the foundation planting or the rock garden.

height of over 3 or 4 feet which makes it a very desirable plant for the foundation planting or the rock garden.

Taxus cuspidata brevifolia. Dwarf Japanese Yew. Blackish green, thick set needles. Irregular, spreading habit. A very fine slow growing dwarf Yew.

Pinus montana mughus

Taxus cuspidata. Spreading Japanese Yew. Rich, deep green foliage with a spreading habit. In the Fall the plants bear brilliant scarlet berries. A beautiful and most desirable evergreen. It does very well in the shade and is very hardy.

Tsuga canadensis pendula. Sargent Weeping Hemlock. A very rare and beautiful evergreen of weeping habit.

This group is somewhat similar to the types listed under Columnar Evergreens, except that generally speaking the base of the trees are considerably broader. These Evergreens can be

sheared so that they will retain their desired proportion in respect

BROAD CONICAL EVERGREENS

Retinospora squarrosa veitchi. Moss Cypress. An unusual variety with bluegray foliage of bushy habit with feathery branchlets, giving a woolly appearance.

Retinospora pisifera

broad, irregular pyramid with feathery branches. Grayish foliage shaded purple in the Winter. Very hardy.

Retinospora plumosa. Plume Cypress. Forms a dense, compact, conical tree

Juniperus chinensis oblonga. Forms

to the planting.

Forms a dense, compact, conical tree with green, feathery foliage. It has a very graceful habit and is well adapted to foundation plantings because it can be easily sheared and kept within bounds.

Retinospora, plumosa, aurea. Golden.

Retinospora plumosa aurea. Goldenplume Cypress. Very attractive as it gives eolor to the planting when grouped with other evergreens.

Retinospora filifera. Thread Cypress. The long, threadlike branches are very pendulous and of a bright green color.

Retinospora filifera aurea. Golden Thread Cypress. A golden form of the above. Needs sun to retain its rich golden color.

Retinospora pisifera. Sawara Cypress. A quick growing pyramidal tree with feathery green foliage.

Retinospora pisifera aurea. Golden Sawara Cypress. Golden form of the preceding variety.

Retinospora plumosa

Sciadopitys verticillata. Japanese Umbrella-pine. A very unusual Pine with attractive, light green needles.

Thuja occidentalis vervaeneana. Vervaene Arborvitae. A broad, pyramidal type with greenish yellow foliage. Exceptionally good.

Tsuga caroliniana. Carolina Hemlock. This variety has spreading, half drooping branches. It is perfectly hardy.

RAVEN ROCK NURSERIES

There are some Evergreens which are very slow growing and which never attain any great proportions. We have combined these in this group. They are very interesting and can be used in a great many instances to great advantage.

DWARF COMPACT EVERGREENS

Juniperus excelsa stricta

Juniperus excelsa stricta. Spiny Greek Juniper. This beautiful variety forms a dense, conical tree tapering gradually from the ground to a sharp terminal point. The growth is slow so that it is well adapted for foundation plantings, rock gardens, or other situations where smaller or dwarf trees are required. It is hardy and has a fine glaueous color.

Picea glauca conica

Picea glauca conica. Dwarf Alberta Spruce. Very rare. A charming, compact, cone-shaped evergreen with very dense foliage and of slow growth. Invaluable for formal effects and rock gardens.

Pinus cembra. Swiss Stone Pine. A rare, semi-dwarf Alpine evergreen with deep green needles, silvery underneath. A tree of symmetrical growth and one that will thrive in partial shade.

Pinus cembra

Pinus montana mughus. Mugho Pine. A slow growing dwarf evergreen with dark green needles. The branches are of spreading habit and never attain a height of over 3 or 4 feet which makes it a very desirable plant for the foundation planting or the rock garden.

Thuja orientalis aurea nana

Retinospora obtusa gracilis. Slender Hinoki Cypress. Compact, dark green, frondlike foliage. One of the finest dwarf evergreens for foreground planting.

Retinospora obtusa gracilis compacta. Dwarf Hinoki Cypress. Compact, dwarf, dense, irregular plant with Japanese effect.

Thuja occidentalis globesa

Retinospora plumosa lutescens. This is a dwarf variety of Retinospora plumosa of compact form and golden color. Exceptionally fine because it does not readily outgrow its location.

Taxus cuspidata brevifolia

Taxus cuspidata brevifolia. Dwarf Japanese Yew. Blackish green, thick set needles. Irregular, spreading habit. A very fine slow growing dwarf Yew.

Thuja occidentalis globosa. Globe Arbovitae. Natural globe shape with dense light green foliage.

Thuja occidentalis globosa woodwardi. Similar to the above except that the foliage is somewhat heavier and denser. Very useful as it never grows over 3 feet high and it is perfectly hardy.

Thuja occidentalis wareana. Siberian Arborvitae. Large, glaucous green foliage; pyramidal in shape and very hardy. A comparatively slow grower.

Thuja orientalis aurea nana. Berckmans Golden Arborvitae. A very pretty dwarf compact, formal evergreen with golden yellow foliage.

Evergreens at reasonable prices

Evergreen Shrubs

Each year wc find an ever increasing demand for our evergreen shrubs. The beauty of their foliage, together with their gorgeous flowers, make this one of the most desirous class of plants. Our selection, as you will note, includes many of the newer introductions as well as the old time favorites.

Abelia grandiflora. Choice plants with shining foliage and producing light pink flowers from July until frost.

Azalea amoena. Purple red flowers in April and May. Small, bright green leaves. Very hardy.

Azalea hinodegiri. Undoubtedly the most popular of all Azaleas with many large, bright searlet flowers gracing its evergreen foliage in April and May.

Azalea J. T. Lovett. Flowers in late June and July. Rich carmine flowers completely cover the plant. Decidedly spreading in habit.

Azalea macrantha. Large, single salmon red flowers which bloom later than Azalea hinodegiri.

Berberis verruculosa. Warty Barberry. Very attractive shrub of medium growth with shiny foliage. Fine for the rockery.

Buxus sempervirens. Boxwood. Slow growing, glossy green evergreen. Excellent for formal specimens or for hedges.

Buxus suffruticosa. Old English Boxwood. These dense Boxwood are used extensively for edging. Of slow growth, but very compact and most enduring.

Cotoneaster horizontalis. Rock Cotoneaster. A dwarf shrub of trailing habit especially suited for the rockery. It is eovered with brilliant red berries in Autumn and Winter.

Carolina Rhododendron

Daphne cneorum. Rose Daphne. A dwarf evergreen shrub which bears clusters of pretty pink flowers in May and August. It has a delightful fragrance.

Erica carnea. Spring Heather. Rosy pink flowers in April and May.

Erica vulgaris. Scotch Heather. Rosy lavender flowers in July and August.

Erica vulgaris alba. White Scotch Heather. White flowers in July-August.

Erica vulgaris alporti. Crimson Heather. Dark crimson flowers in July-August.

Erica vulgaris aurea. Golden Scotch Heather. Pink flowers, July-August. Golden foliage in Summer; bronze in Winter.

Erica vulgaris compacta nana. Dwarf, compact growth.

Euonymous microphylla. Shining small green leaves.

Ilex bullata. Resembles dwarf Boxwood. Very hardy.

Ilex opaca. American Holly. Slow growing with short spreading branches. The Holly used at Christmas.

Kalmia latifolia. Mountain-laurel. Does well in sun or shade. Pink to white flowers in June. A fine plant to group with Rhododendrons. We can offer well rooted nursery grown plants as well as collected stock.

Mahonia aquifolia. Oregon Hollygrape. Shiny holly-like green leaves which turn to beautiful tints of red and bronze in the Autumn. Likes shade.

Pachysandra terminalis. Japanese Spurge. An evergreen ground cover with attractive, dark green leaves and white flowers. Will grow in either sun or shade. Especially useful for planting in shady places where grass will not grow.

Azalea hinodegiri

Pieris floribunda. Mountain Andromeda. A low, compact evergreen shrub with small, dark green leaves.

Pieris japonica. Japanese Andromeda. Rich green foliage, tips bronze red in Spring; graceful panicles of white flowers.

Rhododendron carolinianum. Carolina Rhododendron. Nursery grown. The most attractive of the native kinds. Very desirable for foundation planting or among evergreens. It is exceptionally free flowering. Of compact growth with small leaves and flowers varying from light to deep pink.

Rhododendron catawbiense. Catawba Rhododendron. A very hardy variety having rosy purple flowers. The parent of many of the hybrids.

Rhododendron maximum. Native variety. Very suitable for shady places. It is perfectly hardy. The leaves are large and heavy and the flowers vary from white to light pink. We offer plants which have been nursery grown for several years and have developed a fine root system, and also collected plants.

RHODODENDRON HYBRIDS

These magnificent flowering Rhododendrons are now available to our customers at reasonable prices. When grouped with other Rhododendrons or Evergreens, they are always sure to attract the admiration of all plant lovers.

Album elegans. Light blush.
Boule de Neige. Dwarf white.
Charles Bagley. Rich red.
Charles Dickens. Deep scarlet.
Delicatissima. Blush.

Everestanum. Rosy lilac.
H. W. Sargent. Crimson.
Lady Armstrong. Rose pink.
Lee's Dark Purple. Dark purple.
Mrs. C. S. Sargent. Bright pink.

Roseum elegans. Good rose.

Norway Maple

Acer dasycarpum. Silver Maple. A rapid growing tree with light green leaves deeply eut and silvery underneath. Some of these trees are branehed to the ground, making them very useful for sereening purposes.

Acer platanoides. Norway Maple. The most popular street or shade tree. Forms a well rounded, symmetrical head.

Acer saccharum. Sugar Maple. The well known native variety of ereet growth. Good street tree.

Acer palmatum atropurpureum. Bloodleaf Japanese Maple. Rich purple red foliage, deeply cut. The growth is upright and bushy, which makes it one of the most desirable lawn specimens. Best planted in full sun.

Acer dissectum atropurpureum. Jap. Spider Leaf Maple. A very interesting slow growing tree for the rock garden.

Betula alba. White Birch. Collected elumps of the well known native white birch.

Betula alba laciniata gracilis pendula. Cutleaf Weeping Birch. Makes a very pieturesque lawn specimen.

Betala alba purpurea. Purpleleaved White Birch. Fine form with white bark and purplish foliage.

Catalpa bungei. Umbrella-tree. A round-headed tree on straight stems. Very formal.

Cercidiphyllum japonica. Katsura-tree. Develops into a magnificent spreading tree at maturity. Beautiful heart-shaped foliage.

Cornus florida. Whiteflowering Dogwood. A native tree of medium growth.

Cornus florida rubra. Pinkflowering Dogwood. Similar habit as the above, except that the flowers are deep pink.

Ornamental and Shade Trees

There are many fine ornamental and flowering trees which may be planted to great advantage, especially where a small or medium size tree is desired. Our shade trees are especially fine, all of which have been sprayed, pruned and transplanted at regular intervals. They are well-branched and have a fine root system. A few well chosen trees will reward you with an abundance of shade in a few years. Plant a tree and watch it grow.

Crataegus oxyacantha splendens.
Paul's Double Scarlet Hawtborn.

Fagus americana. American Beech. Fine, dense tops with good concentrated root system. Fine for Fall eoloring, the russet foliage adhering all Winter.

Larix leptolepis. Japanese Larch. Especially good for Spring effect. Has the appearance of an evergreen but is deciduous. Grows rapidly and develops into fine specimens.

Magnolia soulangeana. Saucer Magnolia. Large white flowers with purple tint outside. Blooms in April and May.

Magnolia soulangeana alexandrina. Flowers similar to above but appearing 10 days later.

Magnolia soulangeana lennei. A more shrubby tree with large foliage. Flowers are deep erimson outside. Blooms in May about two weeks after Soulangeana.

Magnolia soulangeana niger. Flowers similar to Soulangeana, but much darker in color. Grows in clump form.

Magnolia stellata halleana. Star Magnolia. A dwarf bush form tree with pure white starlike flowers in April.

Malus. Flowering Crab. We have a fine collection of these trees. The flowers as well as the fruit make a wonderful display.

Morus alba pendula. Weeping Mulberry.
One of the most popular small weeping trees.

Platanus orientalis. Oriental Plane. A well-shaped tree with mottled gray green foliage and white trunk.

Prunus pissardi nigra. Purpleleaved Plum. Retains its rich reddish purple foliage all Summer. Pink flowers hardly noticed.

Prunus serrulata kwanzan. Has very double deep pink flowers and is a vigorous growing oriental Cherry.

Prunus subhirtella pendula. Weeping Japanese Cherry. This weeping form is budded on tall stems and has small pink flowers.

Quercus palustris. Pin Oak. A handsome tree with deeply cut shining foliage which turns rich crimson in Autumn.

Quercus rubra. Red Oak. The best allaround Oak, fast growing and very healthy.

Salix babylonica. Babylon Weeping Willow. Wavy, bright green foliage borne on slender, pendant branches. Fine for waterside planting.

Salix elegantissima. Thurlow Weeping Willow. Tall growing, with good foliage. Less drooping than Babyloniea.

Salix vitellina aurea. Golden Weeping Willow. Beautiful with its graceful light green foliage and golden bark.

Sorbus aucuparia. European Mountainash. Well shaped trees of medium growth; glossy green pinnate leaves with clusters of orange searlet berries in the Fall. Valuable for small lawns.

Tilia americana. American Linden. A fine, ornamental tree, pyramidal in form and very shapely, with large, heart-shaped leaves and fragrant flowers in June.

Tilia vulgaris. Small-leaf European Linden. One of the best forms for street or specimen planting.

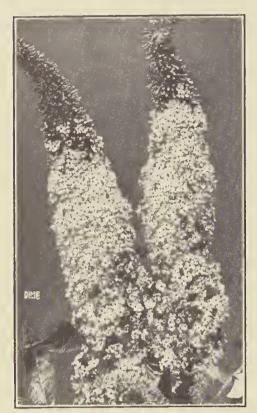

Ulmus americana. American Elm. The most beautiful of Elms. Lofty and spreading, with drooping branches. Needs plenty of room to grow.

Ulmus pumila. Chinese Elm. New, very hardy, drought-resisting and very graceful

Pink Dogwood

Flowering Shrubs

Buddleia—Commonly known as Butterflybush, its deep purple flowers borne on tall, graceful spikes, will add color and beauty to any planting.

Flowering shrubs play a most important part in any well planted homegrounds. Unobtrusively they become the background of a well-planned landscape. They add charm and color to any planting. Their graceful form and beautiful foliage are extremely effective the entire growing season.

The fact that they quickly develop dense masses of foliage make them invaluable as screens and boundaries along highways and adjoining properties. They also make a delightful background for perennial gardens, beds and borders.

Our list of shrubs, while providing varieties for every purpose, is confined to types that will produce highly satisfactory results in this climate.

Selection of shrubs should be made with season of flowering in mind. The proper choice will provide continuous blooming throughout the entire growing season. We are listing our shrubs on the opposite page according to the month they flower. You will also note that for further information we are giving the color so that you will be able to arrange them harmoniously and the characteristics of the growth of the plant to enable you to select the correct location for the type you wish.

There are also a great many berry bearing shrubs which are very interesting. They always help to attract birds and add a touch of color to the landscape with their various-colored berries. We have a large list of these shrubs and will help you with the selection of the berried shrubs you wish.

Most shrubs require pruning annually in order to produce strong, sturdy plants. Generally speaking, it is advisable to cut out some of the older wood and leave the younger growth to mature and produce the flowers. Some shrubs respond best to pruning after they have flowered. If you are in doubt as to the proper method of pruning, we will gladly assist you with any information you desire. The cultivation of shrubs is really very simple and with a little effort and attention you should be able to obtain very satisfactory results.

Many shrubs are suitable for hedges. They make a very pleasing barrier or boundary planting with the many varieties available for this purpose. If you are planning a hedge, why not consult us and we will gladly assist you in selecting the proper type and size for your purpose.

Before even the leaves come out Forsythia is in full bloom. It is a sure sign of Spring when these shrubs become a mass of golden yellow.

Famed through the country for their beauty and fragrance these Hybrid Lilacs are one of the indispensable shrubs. Their many fine colors add much to the landscape

One of the finest shrubs for hedges is Berberis. They remain a beautiful green all Summer and acquire brilliant red fruit in the Fall. Especially hardy in this climate.

Roses

The loveliest of all flowers is the Rose and the sweetest of all perfumes is its fragrance. Almost every home has room for at least a few. To achieve best results, a good loamy soil, well drained and exposed to full sunshine should be selected. Prepare the soil by spading deeply and mixing with it a liberal quantity of well rotted cow manure or a lesser quantity of commercial fertilizer.

The Hybrid Tea or Everblooming Roses have a continual blooming from Junc to Late Fall, and are perfectly hardy if given a slight protection. Our Roses are all strong, 2 year old, budded, field grown plants which we have potted. These plants may be set out any time until the latter part of June and can be relied upon to bloom throughout the first season.

Etoile de Hollande

HYBRID TEA or EVERBLOOMING ROSES

Autumn. Burnt orange, streaked red. Betty Uprichard. Brilliant orange earmine. Edith Nellie Perkins. Cerise orange, yellow rose. Etoile de Hollande. Brilliant red, great size. Kaiserin Auguste Viktoria. Most popular white. Margaret McGredy. Orange searlet. Mevr. G. A. Van Rossem. Orange apricot to yellow. McGredy Scarlet. Brilliant scarlet, orange base. Mrs. E. P. Thom. Bright canary yellow Mrs. Henry Bowles. Pink, flushed salmon. Mrs. Henry Morse. Bright pink, silvery shadings. President Herbert Hoover. Maroon, orange and gold. Radiance. Most popular bright pink. Red Radiance. Bright rosy red Rev. F. Page-Roberts. Golden yellow, stained copper. Souv. de Georges Pernet. Pleasing orange pink.

POLYANTHA ROSE

Gloria Mundi. Orange-scarlet flowers in elusters.

CLIMBING ROSE

Paul's Scarlet. Fiery searlet.

TREE ROSES

Countess Vandal. Pink, copper, gold and salmon.
Etoile de Hollande. Brilliant red, great size.
Mrs. E. P. Thom. Bright canary yellow.
President Herbert Hoover. Maroon, orange and gold.
Red Radiance. Bright rosy red.

ROCK GARDEN ROSE

Rosa Rouletti. A very dwarf and perpetual blooming rock garden Rose with small pink flowers.

Talisman. Gold, searlet and orange.

Clematis paniculata

Vines and Climbers

This class of plants is most useful to earry out some particular scheme in the landscape or to round out and complete some planting. Nothing adds so much to the homelike appearance of a house as a few well chosen vines.

Ampelopsis veitchi. Japanese or Boston Ivy. This useful vine has glossy foliage which stands smoke and dust.

Clematis jackmani. Dark purple flowers with ribbed bar down the center of each sepal.

Clematis paniculata. Sweet Autumn Clematis. Fluffy, white, very fragrant flowers in September.

Hedera helix. English Ivy. An evergreen elimbing vine which makes an ideal wall cover. Pot-grown plants.

Hedera helix minor. Small-leaf English Ivy. Similar to the above except that the

leaves are smaller and the plant is of slower growth. Pot-grown plants.

Pachysandra terminalis. Japanese Spurge. A low growing, evergreen plant 6 to 8 inches high. Especially useful to plant in places where grass will not grow. Pot-grown plants.

Polygonum auberti. Chinese Fleecevine.
A strong, vigorous grower with sprays of white flowers.

Wisteria sinensis. Chinese Wisteria. A fast, tall growing climber with long clusters of purple flowers. Profusion of blooms in May.

In Conclusion

We sincerely hope you have derived enjoyment and help from the preceding pages of this booklet. Of course, in the few pages available, we have not been able to answer every question that might come up in your planting problems. Neither have we had the space to make a complete listing of our stock. We invite your inquiry at our nursery. Your problems can be practically and economically dealt with.

BUSINESS TERMS

IMPORTANT—Order early and take advantage of our complete assortment. We ask that shipping directions be explicit; whether by express, parcel post, freight, or by truck. If we do not have this information we will use our best judgment and ship at the proper time and best method.

TERMS—Cash or satisfactory references must accompany all orders from purchasers unknown to us. A deposit of 20% will hold any tree for later delivery. To persons of established credit the terms are net 30 days. Interest charged on all accounts after maturity.

PACKING—Where shipments are made by freight, express or parcel post, a nominal charge will be made for labor and material used.

GUARANTEE—All stock will be in good condition when shipped; strong, healthy and true to name; but due to varying climatic con-

ditions, soil, location and after care, it is impossible for us to explicitly guarantee our stock to live. However, where we are satisfied that the plants have had proper care, we will do our utmost to be fair and reasonable in any adjustment.

While we exercise the greatest care to have all our trees, shrubs and plants true to name, we do not give any warranty expressed or implied, and it is understood and agreed between the purchaser and ourselves that we shall not, at any time, be held responsible for a greater amount than the original purchase price.

All claims for errors or omissions must be made within 5 days after receipt of goods or claim will not be allowed.

DELIVERY—The prices given are F.O.B. our nurseries. Free delivery within 10 miles, and beyond that a moderate charge will be made for delivery by our truck, unless other arrangements are made at time of sale.

FRUITS

Plant fruit trees. They will bountifully reward you in the fruit they yield and which you will enjoy eating right from the tree.
